

Think of it like this:

	Installer Image (4.4 GB)	VirtualBox Pre-built (3.6 GB)
What you download	Kali installation <code>.iso</code>	An already-installed Kali VM
Kali already installed?	✗ No	✓ Yes
In VirtualBox	Create a new VM yourself	Open/import the provided VM
Installation wizard	✓ You go through it	✗ Mostly skipped
Choose username/password	✓ During installation	Default initially: <code>kali</code> / <code>kali</code>
Disk/partition setup	✓ You configure it	✓ Already configured
Time required	Longer	Much faster
Customization	More control	Less initial setup
